

5/5

Meeting start 6:04

Discussed what we would be adding to the project as well as how we wanted to set up the last planning document. We decided to write a small paragraphs for each step in the program planning process to form a tale of our planning

Intro- Trevor

Program 01- Parker

Program 02- Trevor

Program 03- Jacob

Program 04- Jacob

Program 05- Jason

Program 06- Sam

Conclusion - Trevor

Discussed how the java.util timer works and how to make it work for us.

5/7

Meeting start 6:09

We worked on our planning doc essay for program 6 and then ran into cast errors. Most of the time spend was fixing this error.

5/8

Meeting start 6:13

Discussed planning doc essay and we went over the code that was written for the final piece Jason had a fully functional program with a timer and a game win function. That being said a couple of bugs were found with the rotation on the game win function and so we ironed those out

5/14

Meeting Start: 6:08

Cleanup and turn in. Decided to add comments to our code and flushed out our users manual. We encountered a github problem that wouldnt let us push but we worked away around it. We also did some bug and QnA testing to make sure that even with fringe cases the program worked as intended. Polished up and turned everything in.
