

3/3

Start: 5:00

End: 6:00

Parker edited the file names and extension of our files to fix them to standard. He changed the JFrames to jpanels and fixed the text errors that occurred.

Jason suggested we change how the panels are numbered to make things easier.

Parker made a small gap between tiles but the tiles still does not have a border.

Trevor discussed a fix for weird things happening with position. Parker changed eclipse to use spaces instead of tabs and explained it to us. This is done via the window options.

Trevor fixed file extensions.

All of us began to work on strange resizing issues.

Sam found out how to wrap our lines at 80 characters by having eclipse set the max line size to 80.

Trevor explained how to swap jpanels with a nested if statement so we would be able to move our panels around as needed, however he needed help on getting mouse clickability to function.

Parker fixed headers for our project with a little clarification from us on what they should be.

Jason uploaded the mouseListner

Decided as a group on a boolean for marking if a tile should be empty tile or a drawn tile.

3/5/10

Start: 4:00

End: 5:00

We had a lot of technical problems for this meeting due to github issues and internet issues in the library meeting room. The only thing accomplished this meeting was deciding to use Jason's wrapper method to accomplish the click and swap.

3/10

Start: 5:00

End: 6:00

We as a group went through and fixed the headers after going through the tasks we had to fix that we got points off for from last time. We decided as a group on 100x100 tile size. Final push for program 2.
